#### 1.4 Document Purpose

The purpose of this document is to provide the specifications for the system. It will describe what the system will look like, as well as define the features the system will be able to perform.

#### 2 Project Overview

#### 2.1 Project Description (including Project Background)

This project is for the Downsview Advocate newspaper. It is a content management system. Right now, the workflow is like this: the writers submit articles to the editor in various forms. The editor arranges all the articles to the realtimeboard web app and blocks off. The sales manager puts all the ads on and blocks off too. The editor and sales manager upload the articles and ads to google drive. The designer checks the space arrangement from realtimeboard and grabs the contents from the google drive and designs. There are a lot of human labours and cost a lot of time.

The new system will place all the contents into one database management system. This system allows the writers to upload the articles, the photographers to upload the photos, the editor to grab and modify the contents, and the sales manager to upload the advertisements via browser. This system guarantees the latest version of the content. Content edit histories will be stored and can be traced. The system also displays the articles online, schedules options, publishes the content to social media and embeds in processing the Metadata entry and optimization tools.

#### 2.2 Positioning

#### 2.2.1 The Business Opportunity

This system has given the opportunity to develop a computerized system for the Downsview Advocate, whose workflow is currently based on google drive.

#### 2.2.2 Problem Statement

| Problem of                                  | Current contents managements and web         |  |
|---|--|--|
|   | publication are inefficient, error-prone and |  |
|   | cause unnecessary labor cost                 |  |
| Affects Editor, sales manager, and designer |  |  |
| The Impact of which is                      | Limit the team to improve the quality of     |  |
|   | publication                                  |  |
| A successful solution                       | Perform a content management system that     |  |
| would                                       | allow editors to plan the print publication  |  |
|   | content, manage print page space and manage  |  |
|   | web content publication in an automated way  |  |

#### 2.3 Stakeholders and Users

#### 2.3.1 Stakeholders

| Stakeholder    | Type of User  |
|----------------|---------------|
| Manager        | User, Sponsor |
| Editor         | User          |
| *Administrator | User          |
| Sales Manager  | User          |
| Writers        | User          |
| Photographers  | User          |
| Designer       | User          |
| Developers     | Developer     |

<sup>\*</sup>NOTE: Administrator is the system administrator, not management administrator

#### 2.3.2 Stakeholder and User Needs

| Actor         | Description                                       |
|---------------|---|
| Manager       | Oversees all the operations                       |
| Editor        | Oversees all the content in terms of the articles |
| Administrator | Manages the system                                |
| Sales         | Submits all of the advertisements                 |
| manager       |   |

| Writers      | Contribute contents    |
|--------------|------------------------|
| Photographer | Contribute photos      |
| S            |                        |
| Designer     | Designs ads and layout |
| Developers   | Develop the system     |

#### 2.3.3 Product Position Statement

| For:        | All staff members in Downsview Advocate           |  |  |
|-------------|---|--|--|
| Who:        | Requires one easier way to perform the content    |  |  |
|             | management  |  |  |
| The:        | "Newsfish" is a content management system         |  |  |
| That:       | : Provides improved print content management and  |  |  |
|             | automated web content publication functions       |  |  |
| Unlike:     | Current manual management solution                |  |  |
| Our Project | Will make complex processes simple and automated, |  |  |
|             | greatly improve the efficiency of the current     |  |  |
|             | management system                                 |  |  |

#### 2.3.4 Constraints

| Constraint                | Description                    | Workaround or Solution       |
|---------------------------|--------------------------------|------------------------------|
| Limited time to implement | Due to the eight month         | Due to our team members all  |
|                           | window for PRJ566 and          | have some experience on      |
|                           | PRJ666, developing the         | PHP and MySQL. We will       |
|                           | contents management system     | choose matured LAMP          |
|                           | with a small team will require | technology to implements our |
|                           | a lot of hard, dedicated work  | design.                      |
|                           | to create all the product      |                              |
|                           | components (database design,   |                              |
|                           | database implementation,       |                              |
|                           | web application UI design).    |                              |

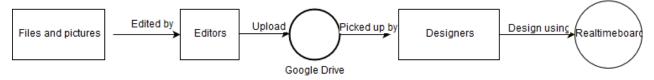

## 2.3.5 Operating Environment

• LAMP –Linux, Apache, MySQL, and PHP( need to verify current system environment)

#### **Work Breakdown Structure:**

#### 4 Architecture

4.1 Technologies Used

LAMP - Linux Operation System

Apache HTTP Server

MySQL relational database management system
PHP

**4.2 Operational Requirements** 

N/A

4.3 Performance Requirements

No requirement

**4.4 Security Requirements** 

User account protected security system

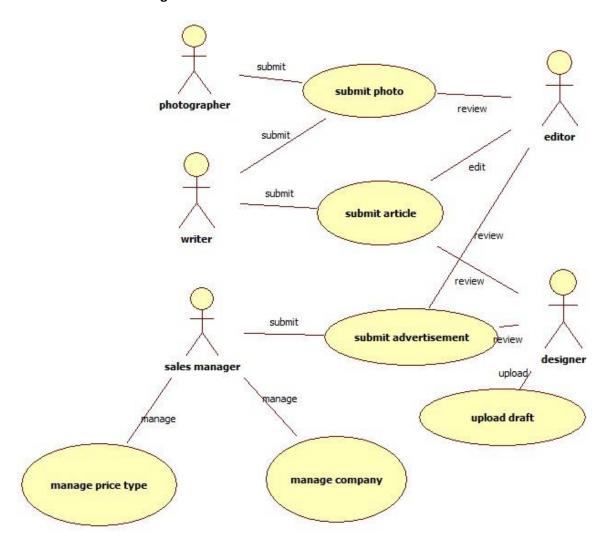

## 5 Design

## **5.1** Business Rules

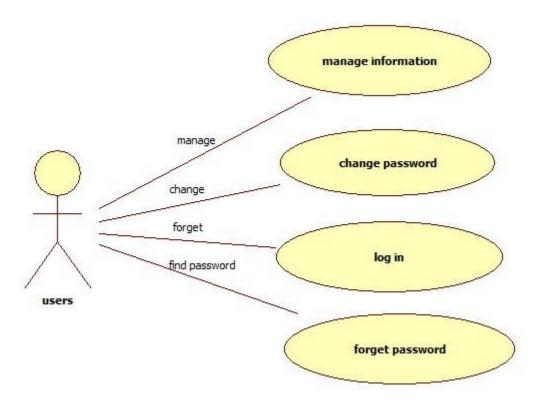

| Rule # | Description                                  | Reference |
|--------|--|-----------|
| 1      | The file format that writer submit must be   |           |
|        | MS word document or plain text format        |           |
| 2      | The contents must be edited before space     |           |
|        | design                                       |           |
| 3      | All the advertisement must be submitted      |           |
|        | only by the sales manager.                   |           |
| 4      | Web version must be published after print    |           |
|        | version                                      |           |
| 5      | Content must has a title and photos must     |           |
|        | have captains                                |           |
| 6      | Edit must be completed before deadline so    |           |
|        | the Designer have time to do space design    |           |
| 7      | User's email must be unique                  |           |
| 8      | Company name is not empty                    |           |
| 9      | Password and re-password must match          |           |
| 10     | Telephone number must be 10 digits           |           |
| 11     | PriceMin is less than priceMax, both of them |           |
|        | are double                                   |           |
| 12     | Edit must be completed before deadline so    |           |
|        | the Designer have time to do space design    |           |
|        |  |           |

#### 5.2 Business Use Case Diagram

#### **5.3 Use Case Specifications**

## 5.3.1 Use Case Specification: writer submit contents

Identifier: WriterSubmitContent

**Brief Description:** This use case enables the writer to submit articles and photos

#### Section 1: Business Rule(s):

- Content must has a title
- The articles format must be MS word documents or plain text

Section 2: All Scenarios:

Scenario 1: writer submit contents

Precondition: writers must log in

|   | Actor( writer)         | System                                    | Data Used                |
|---|------------------------|---|--------------------------|
| 1 | Request upload article | Display submit form, prompting input      | userId                   |
|   |                        | title, photo caption, photo upload, file  |                          |
|   |                        | upload, article                           |                          |
| 2 | Fill the form and      | Validate format, title, if success;       | articleId, articleTitle, |
|   | submit                 | If file is not MS document, parse article | timestamp, article,      |
|   |                        | to photos and plain text, save the        | photoId, file,           |
|   |                        | article's text and photo to database. If  | photoCaption, photo      |
|   |                        | not, go to *A1                            |                          |

Alternative flow: A1

|   | Actor( writer)                  | System                                     | Data Used |
|---|---------------------------------|--|-----------|
|   |                                 | Highlight invalid items, Hint actor to re- |           |
|   |                                 | input items.                               |           |
| 1 | Modify input items and resubmit | Go to main flow step 2                     |           |
|   | resubilit                       |  |           |

Post Conditions: articles or photographs submitted and saved to the database

5.3.2 Use Case Specification: photographer submit photos

Identifier: PhotographerSubmitPhotos

Brief Description: This use case enables the photographers to submit photos

Section 1: Business Rule(s):

• photos must have captains

Section 2: All Scenarios:

Scenario 1: photographer submit photos

Precondition: photographer must log in

|   | Actor(photographer)      | System   | Data Used           |
|---|--------------------------|--|---------------------|
| 1 | Request upload photos    | Display upload form, prompting upload photo caption, photo.                | userId              |
| 2 | Select photos and upload | Validate form, if success, save the content to database. If not, go to *A1 | photoCaption, photo |

|   | Actor(photographer)    | System                                     | Data Used |
|---|------------------------|--|-----------|
|   |                        | Highlight invalid items, Hint actor to re- |           |
|   |                        | input items.                               |           |
| 1 | Modify input items and | Go to main flow step 2                     |           |
|   | resubmit               | _  |           |
|   |                        |  |           |

Post Conditions: articles or photographs submitted and saved to the database

#### **5.3.3** Use Case Specification: Editor edit contents

Identifier: EditorEditContents

**Brief Description:** This use case enables editor to edit contents, set editing status, set content other attributes such as location (page number of the print news page), web version location.

#### **Section 1: Business Rule(s):**

• Edit must be completed before deadline so the Designer have time to do space design

#### **Section 2: All Scenarios:**

#### Scenario 1: Editor edit the content

Precondition: Editor must log in

|   | Actor( editor )          | System  | Data Used  |
|---|--------------------------|---|--|
| 1 | Request edit content     | Display available articles list and photo list  | articleId, articleTitle, photoId, photoCaption, photo, |
| 2 | Select a content to edit | Display article ( if it is article allow edit text), list and allow available attributes to be editable | photoEditFinishOrNot                                   |

|   |                 | If content is photo: editable attributes include: articleTitle, caption, photoEditFinishOrNot  If contents is article: editable attributes includes: location, category, articleTitle, photos, articleEditFinishOrNot | location, category,<br>articleTitle, photos<br>articleEditFinishOrNot                |
|---|-----------------|---|--|
| 3 | Edit and submit | If content is article, move original article to history table and save edited article and attributes settings to database   | articleTitle, photoCaption, article, category, location, articleId, historyTimeStamp |

Post Conditions: contents and content attributes setting are edited and saved to the database

#### Scenario 2: editor review advertisement

Precondition: At the moment when the use case begins, the system is displaying the list of advertisement with a prompt of review

| Actor             | System                            | Data Used  |
|-------------------|-----------------------------------|--|
| request to review | display the advertisement detail. | advertisementId,companyName, companyAddress, name, email, phone, designOption, contentRevision, printOption, printSizeW, printSizeH,webSizeW, webSizeH, type |
| choose exit       | display the list of advertisement |  |

5.3.4 Use Case Specification: Designer design space

Identifier: DesignerDesignSpace

**Brief Description:** This use case enables designer to pull out all final contents currently available in database and save design back to database

#### **Section 1: Business Rule(s):**

• All content must be edited by the Editor before space designing

#### **Section 2: All Scenarios:**

#### Scenario 1: Designer grab available contents

Precondition: Designer must log in

|   | Actor(designer )                                       | System  | Data Used |
|---|--|---|-----------|
| 1 | Request available contents for space design            | Display all available edited contents list              |           |
| 2 | Select contents to<br>download and request<br>download | Pull out content from database and send to the designer |           |

Post Conditions: available contents are downloaded to the local computer

#### Scenario 2: Designer upload designed result to database

Precondition: Designer must log in

|   | Actor(designer )  | System                        | Data Used |
|---|---|-------------------------------|-----------|
| 1 | Request upload<br>designed result                         | Display upload form           |           |
| 2 | Select the space<br>designed file to upload<br>And submit | Save the file to the database |           |

Post Conditions: space design file is uploaded to the database

#### Scenario 3: Designer Review Space Design Result

Precondition: Designer must log in

| Actor(designer)  | System | Data Used |
|------------------|--------|-----------|
| Incom (designer) | System | Data obta |

| 1 | Request review space design file | Display space design result file link, and allow download to local computer |  |
|---|----------------------------------|---|--|
| 2 | choose download file             | Send space design result file to designer.                                  |  |

Post Conditions: space design file is downloaded to the local computer

#### 5.3.5 Use Case Specification: Sales manager submit advertisements

Identifier: SalesManagerSubmitAdvertisements

**Brief Description:** This use case enables sales manager to submit ads to database

#### Section 1: Business Rule(s):

• Only sales manager can submit the advertisements

• Company name is not empty

#### **Section 2: All Scenarios:**

#### Scenario 1: Sales manager submit new advertisement

Precondition: sales manager must log in

|   | Actor(Sales manager)  | System  | Data Used  |
|---|---|---|--|
| 1 | Request submit new ads  | Display submit form which must specify companyName, companyAddress, name, email, phone, designOption, content, printOption, printSizeW, printSizeH, webSizeW, webSizeH, priceType |  |
| 2 | Upload ads, enter the companyName, companyAddress, name, email, phone designOption, content, printOption, printSizeW, printSizeH, webSizeH, webSizeH, priceType | Company name is not empty, print size is int, store the content into the system, display list of advertisement.   | advertisementId,companyNa<br>me, companyAddress, name,<br>email, phone, designOption,<br>content, printOption,<br>printSizeW,<br>printSizeH,webSizeW,<br>webSizeH, priceType,<br>timestamp |

| 3 | Choose exit | Display the list of advertisements |  |
|---|-------------|------------------------------------|--|

Post Conditions: New ads are submitted and saved to the database

#### Scenario 2: Sales manager resubmit previous advertisements

Precondition: sales manager must log in

|   | Actor( Sales manager)       | System  | Data Used   |
|---|-----------------------------|---|---|
| 1 | Request submit previous ads | Display the advertisement details with a prompt of resubmit   |   |
| 2 | Choose resubmit             | Company name is not empty, print size is int, store the content into the system, display list of advertisement. | advertisementId, companyName, companyAddress, name, email, phone, designOption, contentRevision, printOption, printSizeW, printSizeH,webSizeW, webSizeH, priceType, timestamp |
| 3 | Choose exit                 | Display the list of articles  |   |

Post Conditions: Previous ads are re-submitted and saved to the database

#### 5.3.6 Use Case Specification: User sign in

Identifier: UserSignIn

**Brief Description:** This use case enables user regist to the system.

#### Section 1: Business Rule(s):

• User email must be unique

• Password & re-password must match

• Telephone number must be 10 numbers

• PriceMin is less than priceMax

• PriceMin and priceMax are both double

**Section 2: All Scenarios:** 

Scenario 1: UserSignIn

Precondition: At the moment when the use case begins, the system displays home page

|   | Actor(User)   | System  | Data Used   |
|---|---|---|---|
| 1 | Request to sign in  | Display the sign in page  |   |
| 2 | Enter the email,<br>password,<br>re-password, first<br>name, last<br>name, address,<br>telephone,<br>facebook, twitter,<br>role | Validate email address, if not go to *A1. Validate password , if not go to *A2. If all inputs are valid ,save to database, confirm new account is created, display log in page. | email, password, firstName, lastName, address, phone, faceBook, twitter, role |

Alternative flow: A1

| Actor(User)                               | System                              | Data Used |
|---|-------------------------------------|-----------|
|   | Display the account already exited. |           |
|   | Please use another email address.   |           |
| 1 Modify input email address and resubmit | Go to main flow step 2              |           |

|   | Actor(User)                   | System                       | Data Used |
|---|-------------------------------|------------------------------|-----------|
|   |                               | Display invalidation message |           |
| 1 | Enter password and repassword | Go to main flow step 2       |           |

Post Conditions: The user successfully signed in the system

#### **Scenario 2: User Change Password**

Precondition: User must log in

|   | Actor(User)  | System  | Data Used |
|---|--|---|-----------|
| 1 | Request to change the password                                 | Display the change password page  |           |
| 2 | Enter the origin<br>password,<br>new password, re-<br>password | System check the origin password is correct, the origin password does not match the new password, the password matches re-password, i f not go to *A1. Update the new password. Display the welcome page. | password  |

#### Alternative flow: A1

|   | Actor(User)                   | System                       | Data Used |
|---|-------------------------------|------------------------------|-----------|
|   |                               | Display invalidation message |           |
| 1 | Enter password and repassword | Go to main flow step 2       |           |

Post Conditions: User change password successfully

## Scenario 3: User forget Password

Precondition: User does not log in the system

|   | Actor( User)               | System   | Data Used |
|---|----------------------------|--|-----------|
| 1 | Request "forget password"  | Display the "forget password" page   |           |
| 2 | Enter the email            | Validate email, if match, send an email with a link for changing the password. If not match, go to *A1 | email     |
| 3 | Input password, repassword | check the password matches the re-<br>password, update to database. If not<br>match, go to *A2         | password  |

|   | Actor(User)          | System                               | Data Used |
|---|----------------------|--------------------------------------|-----------|
|   |                      | Display no such account, input email |           |
|   |                      | address again                        |           |
| 1 | Modify input email   | Go to main flow step 2               |           |
|   | address and resubmit |                                      |           |
|   |                      |                                      |           |

#### Alternative flow: A2

|   | Actor(User)                   | System                       | Data Used |
|---|-------------------------------|------------------------------|-----------|
|   |                               | Display invalidation message |           |
| 1 | Enter password and repassword | Go to main flow step 2       |           |

Successful Post Conditions: User changes password successfully

## **Scenario 4: User Modify Information**

Precondition: User must log in the system

| Actor(User)                   | System                           | Data Used   |
|-------------------------------|----------------------------------|---|
| Request to modify information | Display the user's information   | phoneNumber, firstName, lastName, facebook, twitter |
| 2 Enter the                   | Update database, display welcome | email   |

| information | page |  |
|-------------|------|--|

Post Conditions: user modify information successfully

#### Scenario 5: User login

Precondition: System must be on

|   | Actor(User)                       | System   | Data Used       |
|---|-----------------------------------|--|-----------------|
| 1 | Request login                     | Display the login page   |                 |
| 2 | Enter the user email and password | Validate email and password, if not match, go to *A1. If match, go to account welcome page | email, password |

#### Alternative flow: A1

|   | Actor(User)              | System                   | Data Used       |
|---|--------------------------|--------------------------|-----------------|
|   |                          | Highlight invalid input, | email, password |
| 1 | Enter email and password | Go to main flow step 2   |                 |

Post Conditions: User login successfully

# 5.3.7 Use Case Specification: Sales manager manage priceType and company information Identifier: SalesManagerManagePriceType

**Brief Description:** This use case enables sales manager to manage the price type.

#### Section 1: Business Rule(s):

- priceMin must not greater than priceMax
- priceMin and PriceMax must be double

#### Section 2: All Scenarios:

#### Scenario 1: Delete PriceType

Precondition: Sales manager must log in, system displays the page with prompt of

## manage price and manage advertisement

|   | Actor(Sales manager)         | System   | Data Used                                     |
|---|------------------------------|--|---|
| 1 | Request to manage price type | Display the manage price type page with the list of price type and a prompt of add new | priceTypeId, priceType,<br>priceMin, priceMax |
| 2 | Choose one type to delete    | Confirm to delete  |   |
| 3 | Confirm to delete            | Update database, display the manage price type page.                                   |   |

Post Conditions: sales manager delete price type successfully

## Scenario 2: ModifyPriceType

Precondition: Sales manager must log in, system displays the page with prompt of manage price and manage advertisement

|   | Actor(Sales manager)                    | System  | Data Used                                     |
|---|---|---|---|
| 1 | Request to manage price type            | Display the manage price type page with the list of price type and a prompt of add new  | priceTypeId, priceType,<br>priceMin, priceMax |

| 3 | Enter new priceType, priceMin, priceMax | Verity the priceMin is less than the priceMax. If not, go to *A1. verity they are both double, if not goto *A2. update the database, display manager priceType page | priceTypeId, priceType,<br>priceMin, priceMax |

#### Alternative flow: A1

|   | Actor(sales manager) | System                                 | Data Used |
|---|----------------------|--|-----------|
|   |                      | Display priceMin should be not greater |           |
|   |                      | than priceMax                          |           |
| 1 | Modify priceMin,     | Go to main flow step 2                 |           |
|   | priceMax             |  |           |
|   |                      |  |           |

|   | Actor(sales manager)      | System                               | Data Used |
|---|---------------------------|--------------------------------------|-----------|
|   |                           | Display priceMin and priceMax should |           |
|   |                           | be double                            |           |
| 1 | Modify priceMin, priceMax | Go to main flow step 2               |           |

Post Conditions: sales manager modify price type successfully

## Scenario 3: AddPriceType

Precondition: Sales manager must log in, system displays the page with prompt of manage price and manage advertisement

|   | Actor(Sales manager)                   | System  | Data Used                                     |
|---|--|---|---|
| 1 | Request to manage price type           | Display the manage price type page with the list of price type and a prompt of add new  | priceTypeId, priceType,<br>priceMin, priceMax |
| 2 | Choose add new priceType               | Display the add price type page   |   |
| 3 | Enter priceType,<br>priceMin, priceMax | Verity the priceMin is less than the priceMax.if not, go to *A1. verity they are both double, if not goto *A2. save to the database, display manager pricetype page | priceTypeId, priceType,<br>priceMin, priceMax |

#### Alternative flow: A1

|   | Actor(sales manager) | System                                 | Data Used |
|---|----------------------|--|-----------|
|   |                      | Display priceMin should be not greater |           |
|   |                      | than priceMax,                         |           |
| 1 | Modify priceMin,     | Go to main flow step 2                 |           |
|   | priceMax             | _                                      |           |
|   | -                    |  |           |

|   | Actor(sales manager) | System                               | Data Used |
|---|----------------------|--------------------------------------|-----------|
|   |                      | Display priceMin and priceMax should |           |
|   |                      | be double                            |           |
| 1 | Modify priceMin,     | Go to main flow step 2               |           |
|   | priceMax             |                                      |           |
|   |                      |                                      |           |

Post Conditions: sales manager add price type successfully

#### Scenario 4: DeleteCompany

Precondition: Sales manager must log in, system displays the page with prompt of manage company information

|   | Actor(Sales manager)                  | System  | Data Used  |
|---|---------------------------------------|---|--|
| 1 | Request to manage company information | Display the manage company page                   | companyId, companyName,<br>companyAddress, name,<br>email, phone |
| 2 | Choose one company to delete          | Confirm to delete                                 |  |
| 3 | Confirm to delete                     | Update database, display the manage company page. |  |

Post Conditions: sales manager delete company successfully

## Scenario 5: ModifyCompany

Precondition: Sales manager must log in, system displays the page with prompt of manage company

|   | Actor(Sales               | System   | Data Used  |
|---|---------------------------|--|--|
|   | manager)                  |  |  |
| 1 | Request to manage company | Display the manage company page with the list of company and a prompt of add new | companyId, companyName, companyAddress, name, email, phone |
| 2 | Choose one company        | Display the modify company page  |  |

|   | to modify          |                                    |  |
|---|--------------------|------------------------------------|--|
| 3 | Enter new          | Validate form, update database. If |  |
|   | companyName,       | any data is invalid, go to *A1     |  |
|   | companyAddress,    |                                    |  |
|   | name, email, phone |                                    |  |

|   | Actor(sales manager) | System                         | Data Used |
|---|----------------------|--------------------------------|-----------|
|   |                      | Highlight the invalidated data |           |
| 1 | Enter data           | Go to main flow step 2         |           |
|   |                      |                                |           |

Post Conditions: Sales manager modify company successfully

## Scenario 6: AddCompany

Precondition: Sales manager must log in, system displays the page with prompt of manage company

|   | Actor(Sales manager)      | System  | Data Used   |
|---|---------------------------|---|---|
| 1 | Request to add company    | Display add company page  |   |
| 2 | Enter company information | Validate form, update database. If any data is invalid, go to *A1 | companyName,<br>companyAddress, name,<br>email, phone |

#### Alternative flow: A1

|   | Actor(sales manager) | System                 | Data Used |
|---|----------------------|------------------------|-----------|
|   |                      | Highlight invalid data |           |
| 1 | Enter data           | Go to main flow step 2 |           |
|   |                      |                        |           |

Post Conditions: Sales manager add company successfully

5.3.8 Use Case Specification: Administrator assign role

Identifier: AdministratorAssignRole

**Brief Description:** This use case enables administrator to assign the roles.

Section 1: Business Rule(s):

**Section 2: All Scenarios:** 

Scenario 1: Assign Role

Precondition: Administrator must log in, system displays the page with prompt of

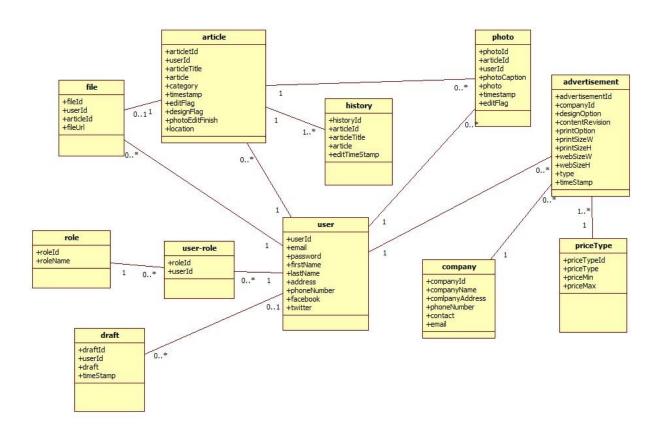

assigning roles

|   | Actor(Sales manager)      | System  | Data Used                   |
